Agenda

How can we improve the forecasting of the **long-term future** needs of educational services?

- **Real case: problems**
- **Strategic analysis—the inverse problem solving**
- **Advanced education—the way to the future**
- **Methodological approach: convergent paradigm**
- **Ecosystem for advanced strategic analysis**

Real case: problems

Graduates \neq Needs

Universities

Kindergartens

Professions do not match

Inertial (statistical)
forecasts

Long-term strategic
planning?

Past

Present

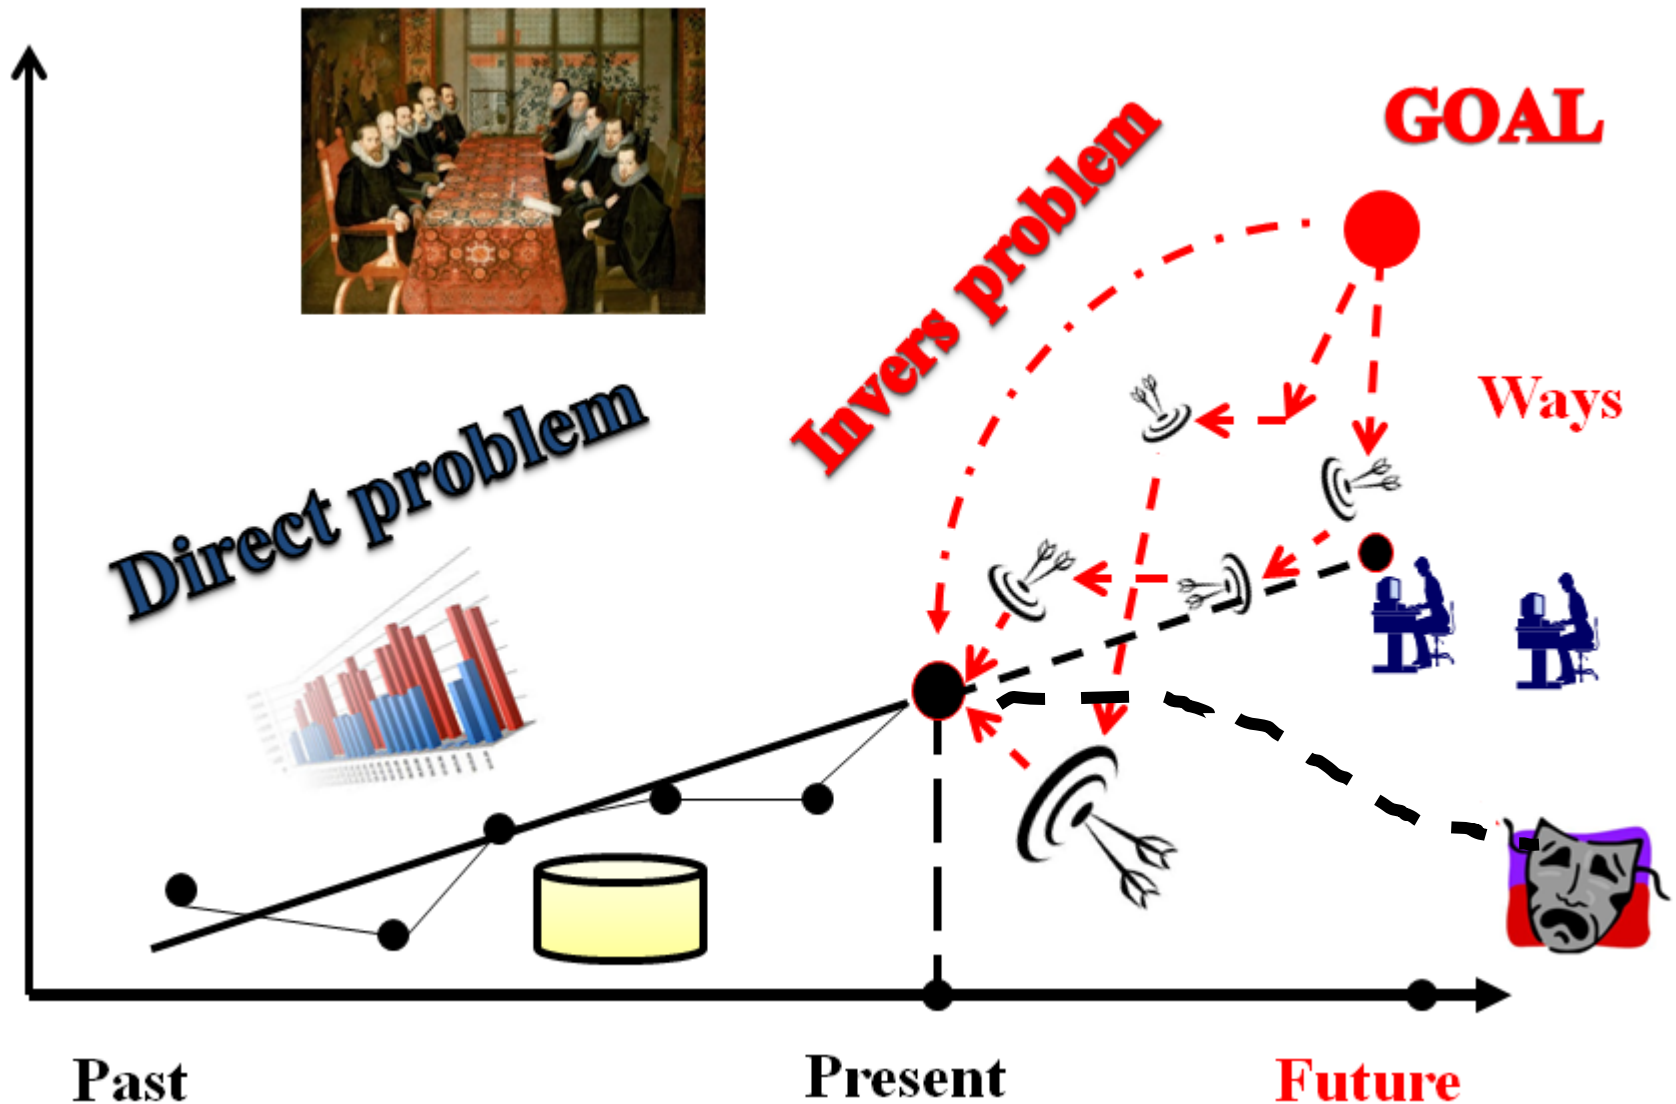

Future

Long-term strategic planning

- Strategic planning is **inverse** problem solving
- It makes one university **different** from another
- The future market's events are **uncaused**
- Strategy is the result of **collective** work

Strategy—Invers problem solving

Advanced education forecasting

- Focus on the **long-term** future
- **Strategic** and breakthrough project
- Creating the **leaders**
- Organising social **elevators**
- **Comfortable** conditions for students
- Government, business, social **collaborations**
- Network **democracy**, etc.

Example

Students begin to study **Strong AI (SAI, ASI, AGI) starting** from kindergarten:

“ D y i n g ”
professions:

- Notaries,
- Librarians,
- Lawyers,
- Psychologists,
- Banking analysts,
- Secretaries,
- Journalists, etc.

Requirements to the new strategic paradigm

- A **sustainable** multi-level education system
- **Cognitive** semantics (emotion, feelings, etc.)
- An **infinite** set of states of forecasting model
- A model may be changed in a **quantised** manner
- The model can be influenced by an **unknown** object
- The space of modelling is **infinite**-dimensional
- The processes must retain their stability

Evolution of methodological approaches

SCIENTIFIC RATIO-NALITY	BASIC PARADIGM	BASIC MECHANISMS AND TECHNOLOGY
Classical, until 1980	Subject - Object	LOGICS , knowledge engineering and bases, thesauruses, frames, semantic networks, statistics, neural networks, system dynamics, differential equations, feedback hierarchical structures.
Non-classical, until 2000	Subject - Subject	NON-CLASSICAL LOGICS (fuzzy, non-monotone, intuitionistic, temporal, modal, etc.), natural computations, artificial intelligence, ontologies, evolutionary computing, discourse, speech acts, network structures.
Post-non-classical	Subject - Meta-subject	CONVERGENT approach is operating using indirect methods. It take into account the collective unconscious, strong AI. It impacts through culture, values, technology assembly of the subjects of development, self-reflective-active environment. Methods: inverse problem solving, cognitive and quantum semantics .

Semantic interpretations

*Strategic
conversations*

*Non-logical
information*

*Cognitive semantic
(uncaused events,
emotions, thoughts)*

GOAL

**Cognitive
models**

Big Data

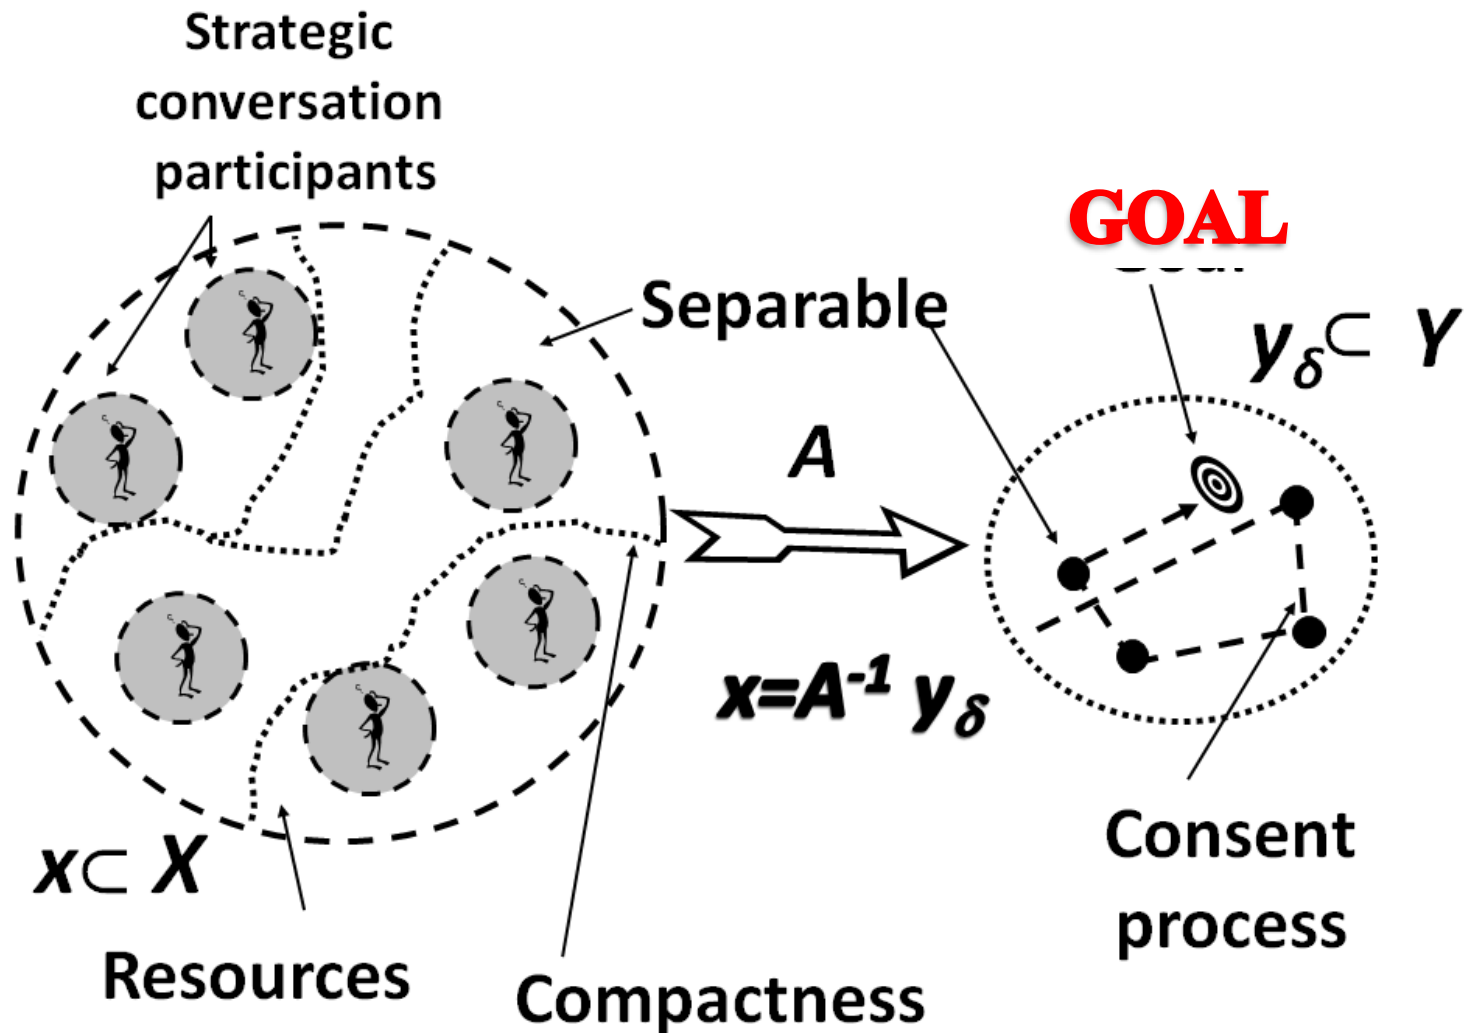

*Formalized
information*

Logical semantics (objects, things)

Convergence approach: the invers problem solving

Convergence approach: the quantum principles

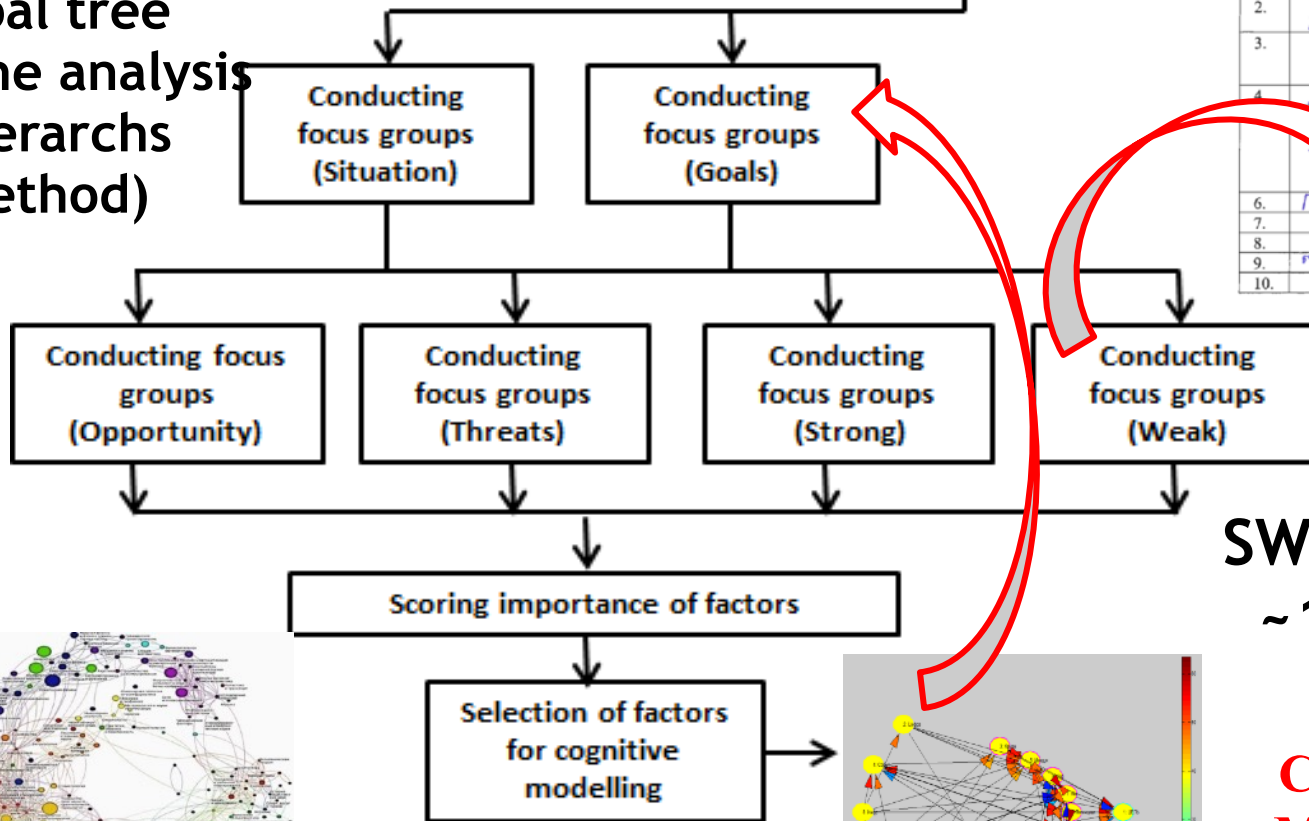

- A quantum particle represents as a **particle and as a wave**
- Any attempt to detect the wave leads to **collapse**
- Any change in the state of a occurs in a **jump**-like manner
- A particle cannot have **zero-values** of its parameters
- A particle cannot be **measured** autonomously
- **Infinite**-dimensional space
- All phenomena are **probabilistic** , etc.

The order of strategies' procedures

Goal tree
(the analysis
hierarchs
method)

№ №	PEST	ФАКТОР	БАЛЛ
1.	Э	Конкуренция со стороны популярных туристических мегаполисов (Гонконг, Токио, Лондон, Париж и др.) постепенно усиливается: конкуренты формируют программы долгосрочного развития туризма.	8
2.	Э	Города-конкуренты инвестируют значительные средства в продвижение	7
3.	П	Города-конкуренты упрощают или упраздняют визовый режим для всех туристов или отдельных категорий туристов	7
4.	Э	У городов-конкурентов развито дешевое авиасообщение	9
		Города-конкуренты занимают значительную долю на мировых туристических рынках (например, МИСЕ: Москва принимает в 5-7 раз меньше конференций/конгрессов чем города-лидеры рейтинга ICCA)	8
6.	ПС	Санкции и их влияние	8
7.	С	Создание негативного имиджа	9
8.		Дорожи	
9.	Т	Транспортная недоступность	7
10.		Москва для некоторых категорий туристов	

SWOT-analysis:
~ 100 factors

~ 15 factors and ~
60 connections

**Cognitive
Modelling**

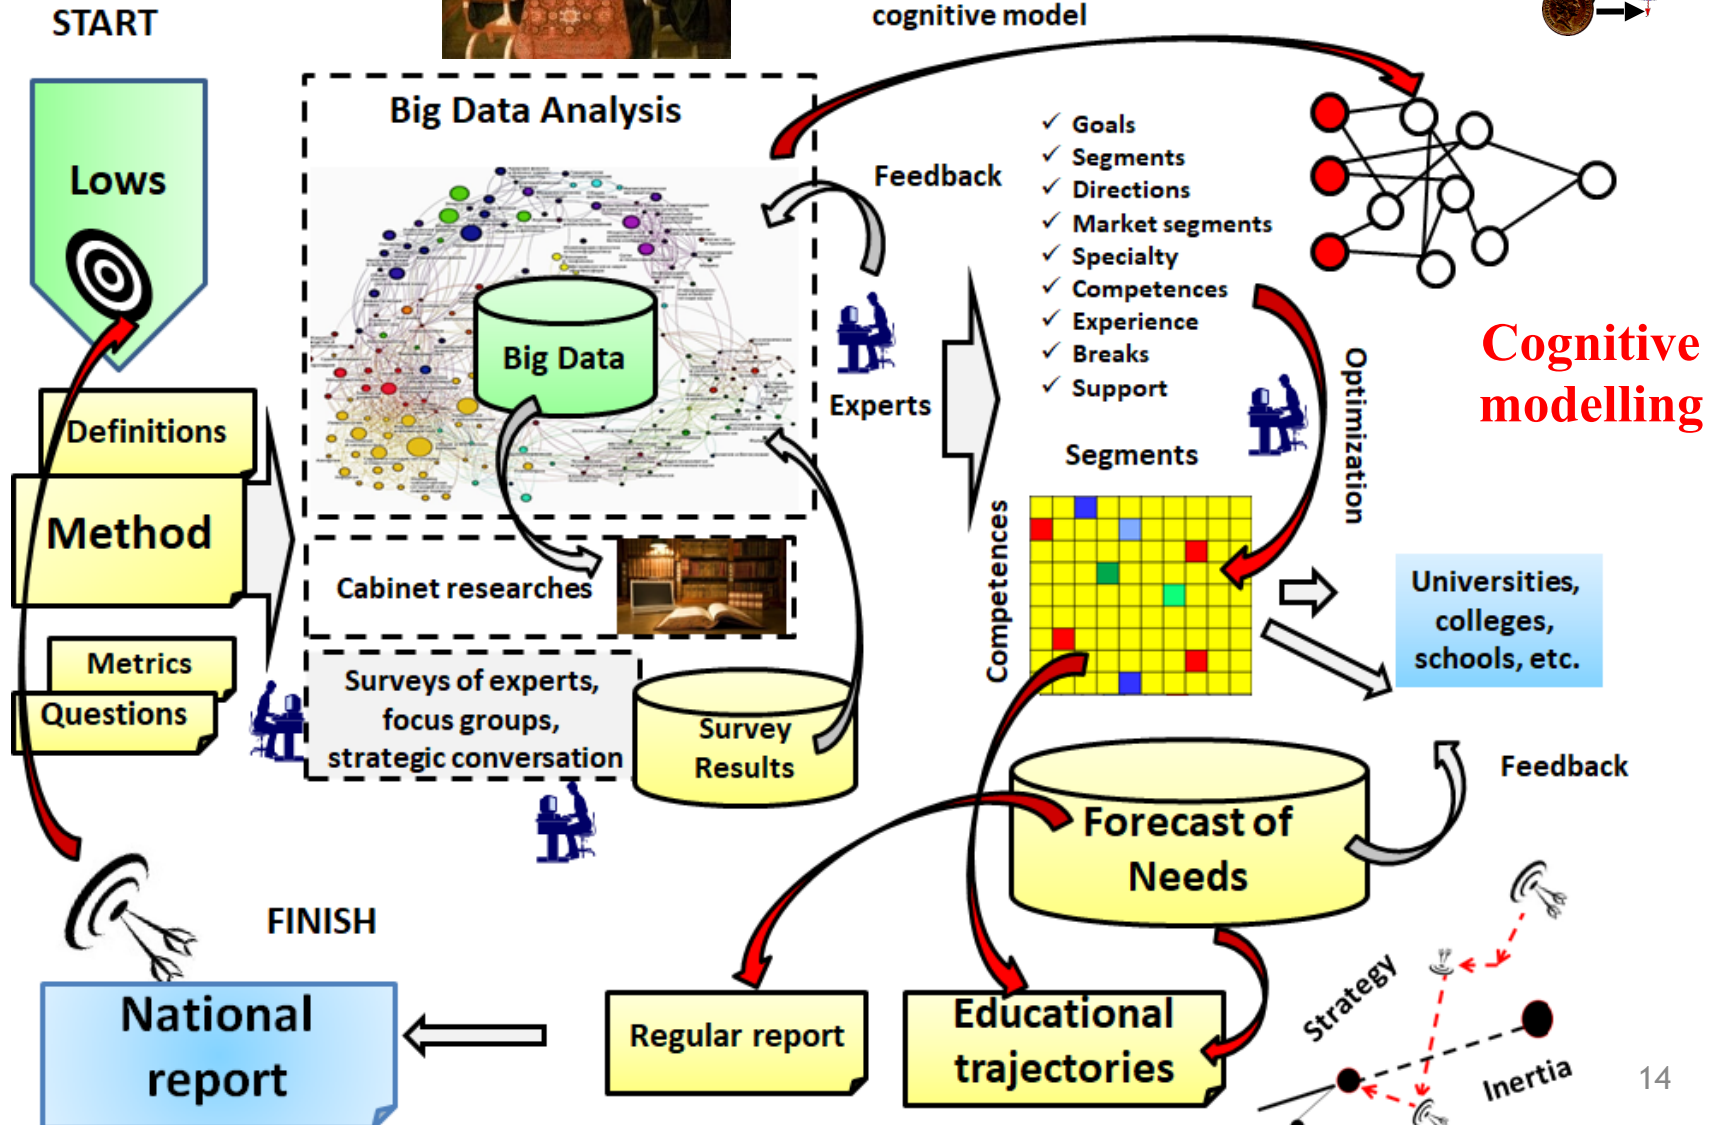

Ecosystem for the strategic analysis

Strategic
conversations

Quantum
semantics
